Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Currently Amended) A computerized method of creating a data message for electronic transmission to a recipient comprising the steps of:
 - selecting at least one medical image file to be included in said data message;
 - determining exchange rights for said recipient, said exchange rights establishing actions available to said recipient with respect to handling of said at least one medical image file after said at least one medical image file has been received by said recipient, said actions comprising at least one of archiving and forwarding of said at least one medical image file; and
 - bundling said at least one medical image file and said exchange rights to form said data message.
2. (Currently Amended) The method of claim [[1]] 52 wherein said selecting further includes selecting at least one image annotation, audio and/or text file related to said at least one medical image file.
3. (Currently Amended) The method of claim 2 wherein said at least one medical image file and related at least one image annotation, audio and/or text file are included in an exam record stored in a database, during said selecting, said exam record being opened to expose the files therein through a user interface thereby to enable files in said exam record to be selected.
4. (Original) The method of claim 3 wherein said user interface is a graphical user interface and wherein files of said exam record are selected using a computer pointing device.
5. (Previously Presented) The method of claim 1 wherein during determining exchange rights for said recipient, different categories of exchange rights are examined to locate the category to which said recipient has been assigned thereby to determine the exchange rights for said recipient.

6. (Original) The method of claim 5 wherein during examination of the different categories of exchange rights, if the recipient is not located, default exchange rights are assigned to said recipient.
7. (Original) The method of claim 5 wherein said different categories of exchange rights include browse only, browse and archive, browse and forward, and browse, archive and forward exchange rights.
8. (Original) The method of claim 2 further comprising the step of encrypting clear text in a selected related text file prior to said bundling.
9. (Original) The method of claim 2 further comprising the step of encoding selected audio and/or text files prior to said bundling.
10. (Original) The method of claim 9 wherein said encoding includes at least one of compressing and scrambling said audio and/or text files.
11. (Currently Amended) The method of claim [[1]] 52 further comprising the step of encrypting said data message after said bundling.
12. (Original) The method of claim 11 further comprising the step of MIME encoding said encrypted data message.
13. (Currently Amended) The method of claim [[1]] 52 wherein said at least one medical image file is compressed.
14. (Currently Amended) The method of claim 13 wherein said at least one medical image file is compressed using a wavelet algorithm and wherein parameters for said compression are computed according to image modality.

15. (Currently Amended) The method of claim 14 wherein said compression parameters accompany said at least one medical image file and wherein said at least one image file is also digitally watermarked.

16. (Currently Amended) A computerized method for controlling actions available to a recipient receiving a data message from a sender, said method comprising the steps of:

creating a data message that includes at least one medical image file and exchange rights for said recipient, said exchange rights establishing actions available to said recipient with respect to handling of said at least one medical image file, said actions comprising at least forwarding of said at least one medical image file;

transmitting said data message to a computer system of said recipient as an attachment to an email message;

upon receipt of said email message deconstructing said data message at said recipient computer system to determine the exchange rights therein; and

permitting the recipient to perform the actions established by the exchange rights on said at least one medical image file.

17. (Original) The method of claim 16 wherein said exchange rights are selected from the group consisting of browse only, browse and archive, browse and forward, and browse, archive and forward exchange rights.

18. (Original) The method of claim 17 further comprising the step of setting a flag following transmission of said data message to said recipient computer system and generating a prompt if a receipt acknowledgement is not received from said recipient computer system within a threshold period of time following said transmission.

19. (Currently Amended) The method of claim 16 wherein during said creating at least one image annotation, audio and/or text file related to said at least one medical image file is included in said data message.

20. (Currently Amended) The method of claim 19 wherein during said creating said at least one medical image file, said at least one related image annotation, audio and/or text file and said exchange rights are bundled to form said data message.
21. (Original) The method of claim 20 further comprising the step of encrypting clear text in each text file in said data message prior to said bundling.
22. (Original) The method of claim 21 further comprising the step of encoding each audio and/or text file in said data message prior to said bundling.
23. (Original) The method of claim 22 wherein said encoding includes at least one of compressing and scrambling each said audio and/or text file.
24. (Original) The method of claim 20 further comprising the step of encrypting said data message prior to said transmitting.
25. (Original) The method of claim 24 further comprising the step of MIME encoding said encrypted data message prior to said transmitting.
26. (Original) The method of claim 25 wherein during said deconstructing, said data message is MIME decoded, decrypted and debundled.
27. (Currently Amended) A computerized method for communicating a data message between a sender and a recipient comprising the steps of:
from a computer system of said sender, transmitting a data message to a computer system of said recipient as an attachment to an email message, said data message including at least one medical image file and exchange rights for said recipient, said exchange rights establishing whether said recipient is permitted to browse said at least one medical image file, browse and archive said at least one medical image file, browse and forward said at least one medical image file, or browse, archive and forward said at least one medical image file;

at the recipient computer system upon receipt of said data message, deconstructing said data message to determine the exchange rights therein; and

permitting the recipient to perform the actions established by the exchange rights on said at least one medical image file.

28. (Original) The method of claim 27 further comprising the step of setting a flag at said sender computer system following transmission of said data message to said recipient computer system and generating a prompt if a receipt acknowledgement is not received from said recipient computer system within a threshold period of time following said transmission.

29. (Currently Amended) The method of claim 28 wherein said data message further includes at least one image annotation, audio and/or text file related to said at least one medical image file.

30. (Original) The method of claim of claim 29 further comprising the step of at the recipient computer system, transmitting a reply data message to the sender computer system.

31. (Original) The method of claim 30 wherein said reply data message includes at least one audio and/or text file and said exchange rights.

32. (Original) The method of claim 31 further comprising the step of setting a flag at said recipient computer system following transmission of said data message to said sender computer system and generating a prompt if a receipt acknowledgement is not received from said sender computer system within a threshold period of time following said transmission.

33. (Original) The method of claim 32 further comprising the step of encrypting clear text in each text file in said data message and said reply data message prior to said transmitting.

34. (Original) The method of claim 33 further comprising the step of encoding each audio and/or text file in said data message and said reply data message prior to said transmitting.

35. (Original) The method of claim 34 further comprising the step of encrypting said data message and said reply data message prior to said transmitting.

36-41. (Cancelled)

42. (Currently Amended) The method of claim [[1]] 52 wherein recipients in an email address book are assigned to categories of exchange rights.

43. (Previously Presented) The method of claim 42 wherein said different categories of exchange rights include browse only, browse and archive, browse and forward, and browse, archive and forward exchange rights.

44. (Currently Amended) A computerized method of creating a data message for electronic transmission to at least one recipient comprising:

selecting at least one medical file to be included in said data message;

determining handling rights for said recipient, said handling rights establishing the recipient's rights with respect to viewing, archiving and forwarding of said at least one medical file; and

bundling the at least one medical file and the determined handling rights to form the data message.

45. (Previously Presented) The method of claim 44 wherein recipients in an email address book are assigned to categories of handling rights, said categories of handling rights being searched to locate said recipient thereby to determine the handling rights therefor.

46. (Previously Presented) The method of claim 45 wherein if said recipient is not located during searching of said categories, default handling rights are determined for said recipient.

47. (Cancelled)

48. (Previously Presented) The method of claim 44 further comprising attaching said data message to an email message.

49. (Previously Presented) The method of claim 45 further comprising attaching said data message to an email message.

50. (Previously Presented) A computerized method of controlling a user's rights with respect to an accessed medical image file comprising:

assigning exchange rights to a user that define the user's rights with respect to viewing and at least one of archiving and forwarding of an accessed medical image file; and

using the assigned exchange rights to determine the user's ability to view and at least one of archive and forward the accessed medical image file.

51. (Previously Presented) The method of claim 50 wherein said exchange rights are selected from the group consisting of browse only, browse and archive, browse and forward, and browse, archive and forward exchange rights.

52. (New) The method of claim 1 wherein said actions comprise at least forwarding of said at least one medical image file.
